MATERIAL PROCUREMENT AND PRODUCTION AT VARIOUS ELECTRICAL MACHINERY PLANTS (35 pp; Germans;

25X1X

25X1X

This document consists of a group of reports on electrical machinery plants in the GDR, as follows:

- 1) Report, dated 10 September 1951, prepared by the Elmo Electrical Equipment Plant, in Dessau, on the procurement of materials in September 1951. It is stated that because of delays in deliveries of copper parts and cast parts, the fulfillment of the September quota for motors cannot be guaranteed by the Elmo Plant. Furthermore, difficulties in the procurement of hot-forging steel and spring-steel sheet are holding up the production of drill-chuck forging machines and compressors, respectively. Other bottleneck materials are also listed.
- 2) Production forecast for the month of September 1951 at the Elmo Plant. Information is given on the status of orders for 36 high-voltage machines and 10 drill-chuck forging machines scheduled for delivery in September. The consumers (GDR plants and foreign countries) are listed, and the number of machines ordered by each consumer is specified.
- 3) Memo, dated 10 September 1951, prepared by the Elmo Plant. It is stated that the plant's critical financial situation was temporarily improved by authorization for orders for 69 drill-chuck forging machines, valued at 1 million DM, and for 100 high-voltage machines, valued at 865,000 DM and to be exported to China. Nevertheless, the plant's credit situation has deteriorated, and the memo emphasizes the necessity for apasic regulation concerning the financial losses incurred during 1951.
- 4) Report, comprising the greater part of the entire document(22 pages), on a production conference held on 11 September 1951 at the VEB(People-Owned Enterprise) Dessau Electric Motors Plant /same as Elmo Plant? which belongs to the VVB-VEM(Federation of People-Owned Enterprises for Electrical Machine-Building). The report concerns the fulfillment of the August 1951 production quota by the plants belonging to the VVB-VEM, and includes the following information: a) general account of quota fulfillment by all plants combined (in percent and IM) for August 1951 and for January August 1951; b) detailed accounts of production during August 1951 at the individual plants, including percentage-fulfillment figures, reasons for cases of nonfulfillment (chiefly shortage of materials and skilled workers), and information indicating the status of individual orders according to plan position numbers (examples of products involved: alternating-current motors, direct-current motors and generators, centrifugal pumps, crane motors, electrode presses). At the conclusion of the report, it is pointed out that the chief difficulties in the production of electric machines by the VEB's of the VVB-VEM are caused by shortages and delayed deliveries of materials. As a result, for VEB's with lower priority orders to those VEB's burdened with reparations and USSR export orders.

FDD Abstract of

NATERIAL PROCUREMENT AND PRODUCTION AT VARIOUS ELECTRICAL MACHINERY PLANTS (35 DD) German

25X1X

25X1A

This document consists of a group of reports on electrical machinery pla in the CDE, as fellows:

1) Report, dated 10 (eptember 1951, prepared by the Elmo Flectrical Equipment lant, Dessau, on the procurement of materials in September 1951. It is stated that because of Lays in deliveries of copper parts and cast parts, the fulfillment of the September quota for motors cannot be guaranteed by the Elmo Plant. Furthermore, difficulties in the procurement of hot-forging steel and spring-steel sheet are holding up the production of drill-chack forging machines and compressors, respectively. Other bottleneck materials are als listed.

27 Production forecast for the month of September 1951 at the Elmo Plant. Informati is given on the status of orders for 36 high-voltage machines and 10 drill-chuck forging machines scheduled for delivery in September. The communers (GIR plants and foreign count

are listed, and the number of machines ordered by each consumer is specified.

3) Head, dated 10 September 1951, prepared by the Flace Plant. It is stated that the plant's critical financial situation was temporarily improved by authorization for orders 69 drill-chuck forging machines, valued at 1 million DM, and for 100 high-voltage machine valued at 665,000 DM and to be exported to China. Nevertheless, the plant's credit situal has deteriorated, and the memo emphasizes the necessity for abasic regulation concerning financial losses incurred during 1951.

h) Report, comprising the greater part of the entire document(22 pages), on a produc conference held on 11 September 1951 at the VFB (People-Owned Enterprise) Dessau Electric Motors Plant Jsame as Blac Plant? , which belongs to the VVB-VEM (Federation of People-Dun Enterprises for Electrical Machine-Building). The report concerns the fulfillment of the August 1951 production quota by the plants belonging to the VVB-VEW, and includes the follower ing information: a) general account of quota fulfillment by all plants combined (in perce and DM) for August 1951 and for January - August 1951; b) detailed accounts of production during August 1951 at the individual plants, including percentage-fulfillment figures, reasons for cases of nonfulfillment (chiefly shortage of materials and skilled workers), and information indicating the status of individual orders according to plan position numbers (examples of products involved: alternating-current motors, direct-current motors and gene ators, centrifugal pumps, orans motors, electrode presses). At the conclusion of the repor it is pointed out that the chief difficulties in the production of electric machines by the VEB's of the TVB-VEH are caused by shortages and delayed delignment of materials. As a res the VEN production management will phenaps find it necessary to transfer materials intended with lower priority orders to those VER's burdened with reparations and USSE exp orders.
